

Press Release:

International Development of BOSTD Geosynthetics

The BOSTD America geogrid manufacturing plant in Blackwell, Oklahoma has been successfully commissioned. This marks the development of BOSTD Geosynthetics into a truly international manufacturer and supplier of high quality geosynthetics. Since establishment in 2000 and the introduction to the world of the first continuous-production line for the manufacture of high quality geogrids in 2002 the BOSTD group of companies has grown to include:

1: BOSTD Geosynthetics:

Established in 2000 BOSTD Geosynthetics has manufacturing facilities for a wide range of products together with specialized test equipment for product development and 24 hour Quality Control. Additional products are also sourced from specialist manufacturers. This ensures that the geosynthetic product ranges that we provide are of consistently high quality and meet the International Standards that our Clients demand. We also have a team of specialist engineers who offer supporting technical and design services to provide economic engineering solutions for our Clients. Our advanced Research and Development laboratories are constantly searching for new products and ways to improve the performance and reduce costs of our existing products. Our product ranges cover integral punched and stretched plastic geogrids, drainage nets and composites, geocomposites, asphalt reinforcement material and geocells that are widely and effectively applied in soil stabilization of roads and other trafficked areas, foundation reinforcement and drainage, landfill and waste water treatment, retaining walls and steep slopes, riverbank repair and development, erosion control and green field applications, to name just a few.

2: BOSTD America

Established in 2015 and located in Oklahoma, BOSTD America is ideally positioned to supply geogrids from its state-of-the-art production and QC facility and other BOSTD Group products to the US market.

3: BOSTD International

Established in 2000 and based in Europe, BOSTD International is responsible for developing and supporting the distribution network for BOSTD Group products in all markets other than the USA and China. Between them, our principals share more than 60 years' experience of the international development, manufacture, application and marketing of geosynthetics to bring to the assistance of our distributors.

Overall, the BOSTD Group has established a highly qualified and experienced professional engineering design team, who create innovative, customised solutions using professional design software. They also provide design consulting and on-site construction supervision for different application areas, with the full range of technical service back-up that our Clients need.

The sales network of BOSTD has covered more than 50 countries around the world. The products have been widely applied to many projects, such as highways and oil sands projects in Canada, port development in the UK, gas plant construction in Saudi Arabia, panel walls in India, road and rail interchanges in Korea, roadways in the USA and many other countries, rail projects in Hungary and Australia.

BOSTD International Ltd.
