

PRESS RELEASE

27th May 2022

Exclusive Anti Cracking GCCM Does not Infringe Concrete Canvas Patent EP 2027319*

Tiltex Australia is pleased to announce that our Exclusive Tiltex Basalt Anti Cracking GCCM (Tiltex B range) does not infringe patent EP 2027319 in the first instance. This ruling was made in Polish Court on 9th May 2022 and concurs with what Tiltex Australia & Tiltex North America has been advising the market for the last 4 years, since the introduction of legal action by Concrete Canvas.

Tiltex Australia & Tiltex North America have focused on the supply, installation and marketing of our higher specification GCCM, offering the market a superior and competitively priced GCCM alternative with installation performed and warranted by our Tiltex B group.

We are proud of our product properties and performance and thank all our customers for their support.

Our Exclusive Tiltex B Anti Cracking fibre enhanced product range provides GCCM properties of 80MPa Compressive Strength, 16.1MPa Flexural Strength & up to 5 metre wide rolls, meaning less seams than narrower GCCM's on the market, offering material & installation savings.

Our internationally trained installation team ensure a quality installation every time combined with our Exclusive Saturation Hydrator and Seaming techniques ensuring all product performance properties are fully met.

To find out more about our Exclusive Anti Cracking Tiltex B GCCM visit our team at Stand 16 at the GeoAnz Conference in Brisbane, 5th to 7th June or speak now to our team live at www.tiltexaustralia.com.au. You can also contact Ben Curtis, our Business Development Manager, on 0294843543 or 0411987531.
