John Holland Again Chooses Tiltex B GCCM over 100mm Concrete

John Holland Bioreactor Project using Tiltex 7B Anti Cracking GCCM

Sydney, NSW - John Holland chose Tiltex 7B Anti Cracking GCCM over 100mm concrete to replace concrete dish drains as part of Sydney Water's Advanced Water Recycling Centre (AWRC).

3200m2 of Tiltex 7B were laid over batters and drains for an erosion control solution for the bioreactor project.

Tiltex Basalt Fibre enhanced GCCM was the preferred product over other erosion control alternatives as it provided impermeability, a maintenance free result and used 86% less concrete than 100mm concrete.

Tiltex 7B's GCCM's wider roll width (5m wide) saved on costs and reduced the project's material requirements with less seams required. A fast installation was also important as the batters were adjacent to access roads where minimal road closure around the site was imperative.

To ensure a successful project, Tiltex Australia provided our client with:

- Construction Methodology
- SWMS
- ITP's & QA/QC Procedures
- Certified Lifting Equipment
- Training and supervision - *whilst we offer a full installation service, we supplied training and supervision for the John Holland team to install.*
