Focusing on Quality for the Geomembrane Industry

## LOCATION, LOCATION, LOCATION!

### GEOTEST AT NEW PREMISES

Geotest are delighted to announce that our team have now moved to newly renovated premises at Wingfield, South Australia.

*The new premises provides an ultra-modern office area and very spacious manufacturing facility. Actually, Geotest are now based in the largest geomembrane factory fabrication facility in the whole State. It is the perfect environment for factory fabrication as the company grows within the industry and is large enough to enable us to fabricate panels as long as 95 meters and up to a weight of 1.5 tonnes.*

Geotest's continued Research and Development and knowledge of the materials and machinery allows us to stay at the forefront of design and continue to deliver high performance products and services. Our equipment is in line with the most modern of technologies and we have recently installed a laboratory testing tensiometer to give even more accurate results in our welding.

Geotest offer their clients the benefit of more than 40 years' experience in the design, installation and testing of geomembrane. Phillip Bennett, Managing Director, has been designing since the 1980's and has successfully delivered over a million square metres to date. Phillip proudly leads a strong and highly experienced team and is very pleased to welcome a further member of personnel. Nader Jamali will be acting as Engineering & Estimating Manager and has personally had experience of 7 years within the industry.

With such a dynamic team, Geotest can offer a much broader range of skills and professionalism to their clients. So, if you are an engineer or represent a lining company, Geotest are here to service your designing needs.

Different location; same contact details and same qualified team.
