

Enable™ 3305MQ

Performance Polymer

Product Description

Enable™ 3305 MQ resin is a medium density ethylene 1-hexene copolymer. Enable™ performance polymer resins offer an outstanding balance between processing and film properties, including tensile, impact and puncture. Easier processing and excellent properties lead to significant high pressure MDPE replacement in many applications, yet with superior drawdown and enhanced toughness. TnPP is not intentionally added to Enable™ 3305 MQ resin.

² Testing performed at 2 in/min on Type IV bars from plaque compression molded based on ASTM D4703

³ type 1

⁴ ExxonMobil has tested 30% NCTL (based on ASTM D5397) on compression molded plaques, both internally and at third party industry labs. All individual test specimens have surpassed 1000 hours. Product performance in fully formulated geomembrane sheets needs to be validated by the end user.
