

February 2020

Dear Colleague,

Safe Containment - Marc Amtsberg to Support Atarfil In Best Engineering Practice

Atarfil has been operating directly in Australia since Q1 2018, following the acquisition of the assets of Garden City Geotech. During this initial period, we have established a local sales and support operation lead by Eduardo Carreras based in Melbourne, with stocks now held in Brisbane, Melbourne and Perth. We are pleased with our initial entry, supplying our range of mainly PE liner systems to the local containment industry nation-wide.

Atarfil products are at the forefront of global production technology and quality utilising in-house designed, superior flat die machinery and highest-grade resins verified by local and international independent testing agencies. In order to increase our Australian support levels, market penetration and bespoke design solutions for the range of more complex containment problems that are a feature of the diverse Australian market, we have recognised the importance of providing stronger value engineering and best practise guidance and education in working alongside designers, installers, asset owners and engineering authorities that make up the containment community. In this way Safe Containment can be best implemented.

We are therefore very pleased to announce that Atarfil has gained the support services of **Marc Amtsberg** to help take our technology to the next level in Australia and to work more closely with containment engineers on projects and to help provide the most appropriate long term solution utilising best engineering practice to achieve Safe Containment.

Marc has over 20 years of geosynthetic experience in design and practical implementation across mining, tailing, water and waste containment applications, including polymer compatibility, interface and internal shear performance, drainage and gas collection and cushion protection layers for geomembranes, with significant experience in project R&D. Marc has written or co-authored many technical papers that focus on best practice and was part of Engineers Australia "Thought Leaders Series – Safe Tailings Dam Construction" in March 2019.

Eduardo and Marc will be in contact with you in the near future and look forward to working with you and your teams.

Sincerely,

Jorge Fernandez Lopez
Sales & Marketing Director
