

ANNOUNCEMENT FROM PRESTO GEOSYSTEMS STATEMENT TO GNA RE: ATRA® Tendon Clip COPIES

20 MAY 2022

It has come to our attention that some customers have recently come across products intended to compete with our patented ATRA® tendon clip geocell load transfer device. Presto has a long history of innovation built on the hard work, creativity, and a commitment of our people to provide customers with innovative solutions. It is through those efforts that we have established an extensive portfolio of active patents around the world. We are currently working with our legal team to address copycat versions of the ATRA® tendon clip, and rest assured, we will continue to protect our intellectual property rights against acts of infringement.

Know too, that while some of these versions may look like our product (original ATRA® tendon clip pictured below for reference), we cannot guarantee the same level of quality, reliability, and proven performance as genuine ATRA® products. We therefore strongly encourage anyone considering using, specifying, or distributing competing versions of the ATRA® tendon clip, or any other geocell accessory intended to mimic one of our patented ATRA® accessories, to obtain third-party test data to ensure the product will meet design/performance requirements, and if necessary, obtain legal or technical advice on the risks to your project.

Original ATRA® Tendon Clip

ABOUT PRESTO GEOSYSTEMS

Presto Geosystems is the original inventor and global leader in geocell technology. Our patented GEOWEB® cellular confinement system, which includes our ATRA® tendon clip, has been installed on thousands of projects in every geographic region in the world, and is the only geocell technology that has stood the test of time for over forty years.
