Genap BV Finishes Final Capping on One of the Largest Landfills in The Netherlands with GSE/Solmax Geomembranes

After three years of high quality team performances Genap recently finished the installation of 560,000 m² (56ha) of HDPE 2 mm GSE/Solmax geomembrane, both smooth and textured types were used. As a drainage system the GSE FabriNet product was installed on top of the geomembrane. On average a quantity of 2000m² of the double layer was installed on a working day by the Genap team consisting of 5 installers.

The former landfill will now be transformed into a public park area in the near future. Further info: <u>www.genap.nl</u>
