Teneo deepens waste management and critical containment expertise with new Director + Orana 3 WIN

TENEO Group have expanded their team with the addition of Luis Rodriguez.

Luis is an Engineering Geologist with over 20 years' experience in Waste Management and critical containment projects, located in Australia, South America and the United Kingdom. He was the Principal Project Engineer at QGC and before that with GHD, AECOM and Mott Macdonald working on brine containment projects as well as design and construction of waste management infrastructure for numerous public and private clients.

Teneo's Operations Director, Barry Griffin, saw the opportunity to broaden what Teneo already offer to clients, particular in the landfill construction sector.

"Luis is able to help clients earlier in the detailed design process to arrive at not only a better costing outcomes, but usually a far more robust environmental solution. Luis has also worked closely with internationally renowned experts in the design and construction of critical containment systems" he said.

"He has a track record for delivering innovative and cost effective solutions for landfill, contaminated sites and critical containment projects".

Luis can see the benefit of a broader approach to protecting the environment that Teneo offers clients.

"We help project become more efficient by getting into the technical part of the design early. Even to the point where the sequence of construction can have a massive impact to the days of the job and the end risk outcome," he said.

Teneo, in partnership with FKG, were recently awarded the Orana 3 Concentrated Brine Re-lining project at Chinchilla from QGC.

"This project is complex and sensitive – exactly what Teneo specialise in".
