E²: A WORLD OF POSSIBILITIES

E Squared, a leader in the development and manufacturing of high-performance coated fabrics, film sheeting and technical textiles is pleased to announce a major expansion of our production, warehousing and distribution capabilities.

Ronald Mark Associates, Inc. along with Virginia Governor Glenn Youngkin have announced a \$13.5 million investment in a manufacturing facility that is located in Bluefield, VA. The Ronald Mark Family of companies is made up of Flex Membrane International, E Squared Technical Textiles and Kinon Decorative Surfaces.

This investment will provide E Squared with much needed manufacturing and warehouse capacity that will support its incredible growth. E Squared was established in June 2019 as a joint venture between Engineered Polymer Technologies (EPT), a division of Ronald Mark Associates and Erez Technical Textiles.

E Squared provides a wide variety of coated fabrics, technical textiles and polymer sheeting in a range of industries, including military, safety, air containment & inflatables, pipe rehabilitation, geomembranes, secondary containment, and primary liquid storage. The establishment of a manufacturing facility in Virginia will not only provide expanded manufacturing and warehouse capabilities but also enhance logistics for serving our customer base.
