FABTECH AUSTRALIA NEWS RELEASE

RE: SYDNEY WATER POTTS HILL RESERVOIRS WS0455 & W0456 REFURBISHMENT— LINER & COVER DESIGN AND INSTALLATION WORKS

ABN 21 060 001 765

Fabtech Australia has been awarded contracts to supply, design and install a new liner and cover at Sydney Water's Potts Hill Reservoirs.

This work is complex, requiring the two reservoirs at Potts Hill being re-built in two phases. This means working adjacent to an operational storage and designing the construction plan to achieve this safely and efficiently.

Specialist geomembrane materials have been selected for the project following extensive testing to prove their capability for the project. Material production is underway and work on site started in April, with completion in 2023.

The combined storage has a total surface area of 180,000m², requiring over 500,000m² of materials to build. It represents the largest floating cover in the Southern Hemisphere.

"We built the original liner and cover at Potts Hill in 1999 and have been supporting Sydney Water since then," said Fabtech Managing Director, Graham Fairhead.

"This project allows Fabtech to draw on its 30 years of experience in designing and constructing floating cover systems and materials engineering to build a world-class asset for Sydney Water. It's exciting and a privilege to work with Sydney Water and their delivery partner D4C."

About Fabtech

Fabtech Australia Pty. Ltd. (Fabtech) is an Australian Geosynthetic Containment Specialist with a national presence and an international reputation. A proven leader in the multi-disciplined technology that encompasses the lining and covering of dams, reservoirs, landfills, effluent lagoons, tunnels, irrigation channels and tanks. Fabtech is certified to ISO:9001 and all onsite installations are backed by an engineering and technical organisation reflective of Fabtech's experience within the synthetic lining industry.
