

PRESS RELEASE

27th May 2022

SIZE DOES MATTER

Our Exclusive Tiltex B Anti Cracking GCCM range offers one of the widest GCCM's available on the market – 5 M wide rolls. We can also customise roll sizes, depending on the application.

Tiltex B's wide roll width provides so many advantages over a narrower GCCM's roll width.

Our wide rolls translates to a lot less seams, being an advantage of 1 Tiltex B seam to 4 of a narrower 1.1M GCCM's seam, faster installation times, less material wastage. Our rolls can be laid equilaterally or longitudinally, both covering a large surface area.

To cover a 1000m long x 10m wide water channel, our Exclusive anti Cracking Tiltex B GCCM requires only 200 panel widths, compared with a narrower GGCM that would require 909 panels.

Our product also provides 80MPa Compressive Strength Concrete & 16.1MPa* Flexural Strength and superior hydration & seaming.

To find out more about our Exclusive Anti Cracking Tiltex B GCCM visit our team at Stand 16 at the GeoAnz Conference in Brisbane, 5th to 7th June .

Talk to our team now via our live chat at www.tiltexaustralia.com.au or contact Ben Curtis, our Business Development Manager, on 02 94843543 or 0411 987 531.
