

## **The organizing committee presents 7th European Geosynthetic Conference to be held in Warsaw, Poland on 4-7 September 2022**

**It is the first live geosynthetics conference to be held after the COVID 19 pandemic, so it is a unique opportunity to learn about the latest industry trends.**

Warsaw is Europe's one of most accessible city connected with the world via two international airports and a fast rail network.

It is a thriving, bustling city that draws visitors with its rich history and unique atmosphere. The pulsing heart of business is here, with modern architecture, welcoming infrastructure, and creative residents. Thousands of business gatherings, including conferences, congresses, and trade shows, are held in Warsaw each year. Here, the scientific, cultural, economic, and political interests of the entire Central and Eastern European region are brought together. As a major corporate center and a popular tourist site, Warsaw currently attracts a large number of visitors.

The conference will be held in the most characteristic building in Warsaw: Palace of Culture and Science.

There are no travel restrictions in Poland, neither due to the pandemic nor the political situation in neighboring countries. What is more several big congresses organized by international societies have taken place already this year in all bigger cities Warsaw, Krakow, Gdansk, Poznan and Wroclaw. All participants have emphasized about great Polish hospitality and the safety they have experienced in Poland.
